

Energy Management System Statement

Bus Átha Cliath - Dublin Bus is the principal public transport company serving the Greater Dublin Area. Dublin Bus aims to provide a safe, secure, reliable, efficient, and accessible bus service to its customers. As part of its environmental strategy, Dublin Bus commits to continuously improving its energy performance and will allocate resources to energy management relating to its vehicles, premises, plant, and equipment.

As a company, Dublin Bus has a responsibility to minimise, as far as is practicable, its energy consumption and impact on the environment. Dublin Bus, where practicable, commits to investing in energy-efficient technology to reduce its emissions and comply with applicable energy legislation and company policies when procuring replacement vehicles and equipment.

Dublin Bus is committed as part of this energy statement to:

- Operate under our Direct Award Public Service Contract requirements with the National Transport Authority and the international standard EN ISO 50001:2018 (Energy Management System) to attain and retain the contract and the recognised accreditation.
- Establish a framework for setting and reviewing energy objectives and targets, including reviewing energy consumption on an ongoing basis.
- Support the procurement of energy-efficient products and services that impact energy performance and support design activities that consider energy performance improvements.
- Promote good energy management practices among employees, external contractors, and suppliers through the use of sustainable procurement where possible.
- Utilise and monitor energy KPIs (Key Performance Indicators), where applicable, to demonstrate performance, identify areas for improvement and provide a framework for the development of objectives and targets.
- Communicate energy statement, energy consumption performance, overall performance, and company objectives to all employees.
- Provide the resources and training to employees to achieve objectives and targets.
- Continuously improve energy efficiency by identifying and implementing energy-saving measures to optimise energy consumption.
- Procure vehicles and equipment that comply with applicable legislation and EU Directives.
